Edible insects have always been a part of human diets, but in some societies there remains a degree of disdain and disgust for their consumption. Insects offer a significant opportunity to merge traditional knowledge and modern science to improve human food security worldwide. This publication describes the contribution of insects to food security and examines future prospects for raising insects at a commercial scale to improve food and feed production, diversify diets, and support livelihoods in both developing and developed countries. Edible insects are a promising alternative to the conventional production of meat, either for direct human consumption or for indirect use as feedstock. This publication will boost awareness of the many valuable roles that insects play in sustaining nature and human life, and it will stimulate debate on the expansion of the use of insects as food and feed.

The 2008 global food price crisis, and the resurgence of food prices in 2010-2011, caused both widespread concern and expectations. On the one hand, countries whose food supply depends on procuring food from international markets saw food price spikes as threats to their national food security. On the other hand, investors saw in these price spikes an opportunity to make profitable investments in agriculture. Either as threat or opportunity, food price spikes raised interest in Africa, whose lands are fertile and have unrealised potential. Concerns of a possible land acquisitions in Africa, and in particular the impacts of Large-Scale Land-Based Investments in Agriculture (LSLBIA) on local communities, became prominent policy and academic themes. Unfortunately, quantifying the phenomenon has proved hard due to the difficulty of finding empirical evidence. As a result, debates are either theoretical or based on anecdotal evidence. This publication thus explores a different path, and explores the reasons why entities from China and South Africa were interested in investing in African agriculture. This publication examines the reasons why investors were interested in Africa, and the relationship that these bear to The Voluntary Guidelines on the Responsible Governance of Tenure of Land, Fisheries and Forests in the Context of National Food Security (the ☐Voluntary Guidelines☐ or ☐VGGT☐). While primarily aimed at governments, the VGGT also contain important provisions that are applicable to the private sector. They focus on helping investors pursue their projects in ways that recognise and respect legitimate tenure rights and human rights. In addition, the VGGT also contain provisions and encourages good practices for responsible investment in land, forests and fisheries. The VGGT are a valuable tool for helping investors minimise risk while also safeguarding the rights of local communities. China and South Africa represent important sources of LSLBIA in Africa, although the bulk of such investment comes from western countries. Their investment may intensify in the future for a variety of reasons. First, China has the third largest land area in the world but its expansion through additional land use is limited. Second, the dual agricultural economy of South Africa is preventing commercial farming located in well-endowed areas from expanding into remote, resource-poor areas where small-scale subsistence-based production is prevalent. This publication assesses the extent to which selected investors from China and South Africa and the governments of those countries have adopted the best practices represented by the VGGT in relation to LSLBIA in

Enhancing the productivity of agriculture is vital for Sub-Saharan Africa's economic future and is one of the most important tools to end extreme poverty and boost shared prosperity in the region. How governments elect to spend public resources has significant development impact in this regard. Choosing to catalyze a shift toward more effective, efficient, and climate-resilient public spending in agriculture can accelerate change and unleash growth. Not only does agricultural public spending in Sub-Saharan Africa lag behind other developing regions but its impact is vitiated by subsidy programs and transfers that tend to benefit elites to the detriment of poor people and the agricultural sector itself. Shortcomings in the budgeting processes also reduce spending effectiveness. In light of this scenario, addressing the quality of public spending and the efficiency of resource use becomes even more important than addressing only the level of spending. Improvements in the policy environment, better institutions, and investments in rural public goods positively affect agricultural productivity. These, combined with smarter use of public funds, have helped lay the foundations for agricultural productivity growth around the world, resulting in a wealth of important lessons from which African policy makers and development practitioners can draw. 'Reaping Richer Returns: Public Spending Priorities for African Agriculture Productivity Growth' will be of particular interest to policy makers, development practitioners, and academics. The rigorous analysis presented in this book provides options for reform with a view to boosting the productivity of African agriculture and eventually increasing development impact.

This book is specially developed for the candidates of CBSE UGC NET : Commerce Junior Research Fellowship and Assistant Professor (Paper II and III) Exam. This book included Study Material and Solved Papers for the purpose of practice of questions based on the latest pattern of the examination. Detailed Explanatory Answers have also been provided for Better Understanding of the Candidates.

Architecture and Agriculture: A Rural Design Guide presents architectural guidelines for buildings designed and constructed in rural landscapes by emphasizing their connections with function, culture, climate, and place. Following on from the author☐s first book Rural Design, the book discusses in detail the buildings that humans construct in support of agriculture. By examining case studies from around the world including Australia, China, Japan, Norway, Poland, Japan, Portugal, North America, Africa and the Southeast Asia it informs readers about the potentials, opportunities, and values of rural architecture, and how they have been developed to create sustainable landscapes and sustainable buildings for rapidly changing rural futures.

India has fallen far and fast from the runaway growth rates it enjoyed in the first decade of the twenty-first century. In order to reverse this trend, New Delhi must seriously reflect on its policy choices across a wide range of issue areas. Getting India Back on Track broadly coincides with the 2014 Indian elections to spur a public debate about the program that the next government should pursue in order to return the country to a path of high growth. It convenes some of India's most accomplished analysts to recommend policies in every major sector of the Indian economy. Taken together, these seventeen focused and concise memoranda offer policymakers and the general public alike a clear blueprint for India's future. Contents Foreword Ratan N. Tata (Chairman, Tata Trusts) Introduction Ashley J. Tellis and Reece Trevor (Carnegie Endowment for International Peace) 1. Raja Mohan (Observer Research Foundation and Carnegie Endowment for International Peace

China's agriculture and rural society has undergone rapid changes in recent years. Many poorer farmers and younger people have moved to cities, and yet China has an immense challenge to feed a growing and more affluent population. This book provides a ☐bottom-up view☐ of China☐s agriculture, showing how the many millions of Chinese peasants make a living. It presents a vivid description of the mechanisms used by rural households to defend and sustain their livelihoods, increase their agricultural production and improve the quality of their lives. The authors examine the newly emerging trajectories of entrepreneurial and capitalist farming and assess whether such alternatives will be able to meet the enormous social, economic and environmental challenges that China faces. The book also explores the paradigm that has underpinned the organisation and development of China☐s agriculture from ancient times to the present day. This shows the importance of balancing in the Chinese model as compared to the one-sided imposition of continual modernization in the western model. It is argued that such balancing is at the core of the current Sannong policy, referring to the three ruralities of food sovereignty, wellbeing for peasant households and an attractive countryside.

Some vols. include supplemental journals of "such proceedings of the sessions, as, during the time they were depending, were ordered to be kept secret, and respecting which the injunction of secrecy was afterwards taken off by the order of the House".

The aim of the book is to introduce the state-of-the-art technologies in the field of robotics, mechatronics and automation in agriculture in order to summarize and review the improvements in the methodologies in agricultural robotics. Advances made in the past decades are described, including robotics for agriculture, mechatronics for agriculture, kinematics, dynamics and control analysis of agricultural robotics, and a wide range of topics in the field of robotics, mechatronics and automation for agricultural applications.
