Muhammad Yunus is that rare thing: a bona fide visionary. His dream is the total eradication of poverty from the world. In 1983, against the advice of banking and government officials, Yunus established Grameen, a bank devoted to providing the poorest of Bangladesh with minuscule loans. Grameen Bank, based on the belief that credit is a basic human right, not the privilege of a fortunate few, now provides over 2.5 billion dollars of micro-loans to more than two million families in rural Bangladesh. Ninety-four percent of Yunus's clients are women, and repayment rates are near 100 percent. Around the world, micro-lending programs inspired by Grameen are blossoming, with more than three hundred programs established in the United States alone. Banker to the Poor is Muhammad Yunus's memoir of how he decided to change his life in order to help the world's poor. In it he traces the intellectual and spiritual journey that led him to fundamentally rethink the economic relationship between rich and poor, and the challenges he and his colleagues faced in founding Grameen. He also provides wise, hopeful guidance for anyone who would like to join him in "putting homelessness and destitution in a museum so that one day our children will visit it and ask how we could have allowed such a terrible thing to go on for so long." The definitive history of micro-credit direct from the man that conceived of it, Banker to the Poor is necessary and inspirational reading for anyone interested in economics, public policy, philanthropy, social history, and business. Muhammad Yunus was born in Bangladesh and earned his Ph.D. in economics in the United States at Vanderbilt University, where he was deeply influenced by the civil rights movement. He still lives in Bangladesh, and travels widely around the world on behalf of Grameen Bank and the concept of micro-credit.

This book discusses Bangladesh ' s economic and social development that may be called a " miracle " since the country has achieved remarkable development progress under several unfavorable situations: weak governance and political instabilities, inequality, risks entailed in rapid urbanization, and exposure to severe disaster risks. The authors examine what led to this successful economic development, and the potential challenges that it presents, aiming to elicit effective policy interventions that can be adapted by other developing countries.

Financial Engineering is now a versatile word in the banking domain and more programmers are now very attracted to it as it has lot to offer to them. Due to these new API's the financial tasks and economic operations have now become a very trivial process than it used to be. The background of the book are not just one but many. To make apps from API are usually not very easy and also not so cost effective. Specially, in the financial sector it is really difficult to make apps to make easy transactions and manage finance in very controlled way. Though, there are some APIs but they are not so much cost effective. At this crisis hour of the financial sectors, a concept came to the author to do some research on how can an API can be free, cost effective and at the same time beneficial to make life easier in the financial sectors. So the author thought he could try and do some researches on some open source APIs likes of OpenMAMA and SMART API. Basically, Open MAMA is more preferred on this matter than the SMART API. And also that it is very compatible with any system and also the direct approach OpenMAMA is very attractive for any developer. Also, it really helps the system to be very cost effective is also a very important characteristics of OpenMAMA. On the other hand to work with something which is not tried out yet has also come into the author mind. As a result author has chosen SMART API which is mostly used in health and medical tasks to be in the author research list. And during the research author has found much relevant evidence that SMART API has the potential to be used in the financial sector if fallen into the right hands. These research really motivated author a lot to have a go in this analysis. The analysis also believe if we can really try then the cost of financial sectors and also money transactions process can be really kept under control by the help of these API's. The analysis has given a lot of examples and also give a financial model in these book so it can demonstrate how easy and cost friendly can these open source API's can be. Besides, it was also motivated to think what blessings it can bring to the financial engineering sectors. Also that the author friends and well wiser did help him with all the things needed to be done like helping him with new concepts, providing him with slides and lectures. They also gave the author some videos as well as some valuable suggestions regarding the book. So, that was the main reason behind writing this book. The expectation of the author of this book is given below: "In this book I have discussed about the financial engineering based on APIs system. I have also discussed about financial modeling, Detail information about OpenMAMA and SMART APIs etc. I have tried hard to proof the connections of this two APIs in the financial engineering and financial transaction modeling. Besides I have provided OpenMAMA and SMART APIs features, advantages, disadvantages, their usability and compatibility etc in the financial engineering task. The most important thing of the book is API based financial transaction modeling system development which I have design and discussed in the "3.0 Main body of the analysis" section. I have written this book in project based book writing process. I don't follow traditional technical book writing process. Because I think project based technical book writing process is helpful for article, report & research paper etc writing. And this process makes a book easy to understand to its reader. So by reading my book a reader can easily understand the topics of the book and he/she can easily gather the ideas about how to write academic, non-academic project report, research paper, article etc. I hope my book will be helpful for the future research about this API based financial engineering. So I can say that this book is beneficial for the long run development of API based financial engineering." Show less

"The Guide, in Part I, begins with a brief description of generalized CEA and how it relates to the two questions raised above. It then considers issues relating to study design, estimating costs, assessing health effects, discounting, uncertainty and sensitivity analysis, and reporting results. Detailed discussions of selected technical issues and applications are provided in a series of background papers, originally published in journals, but included in this book for easy reference in Part II." (from the back cover).

Women have experienced significant changes in various spheres of their lives during the last decades as Bangladesh made economic progress. Yet women ' s economic engagement and empowerment are subdued, as they cannot make sufficient choices for themselves. This book provides a comprehensive analysis of the economic developments in gender equality in Bangladesh. Through examining women ' s participation in the labour force, ownership and control of household assets, use and control of financial assets, and opportunities for entrepreneurship, the authors have made concrete recommendations to overcome challenges that lie ahead for women ' s economic empowerment. This book is an important contribution to the knowledge on interventions required by the policy makers and broader stakeholders towards narrowing gender gaps. --Fahmida Khatun, PhD, Executive Director, Centre for Policy Dialogue (CPD), Bangladesh The women ' s story is central to Bangladesh ' s economic and social transformation. There is an urgent need to deepen researched understanding of the multidimensional pathways of women ' s economic empowerment and extent of real progress made. Voices to Choices is an important contribution to this story. Surely, the journey of women ' s economic empowerment remains a long and challenging one. Realizing the full benefits of new opportunities is often hampered by both new and entrenched insecurities. The task is as much one of empowering women ' s agency as of dismantling barriers. The responsibility is as much women ' s as society ' s. --Hossain Zillur Rahman, PhD, Executive Chairman, Power and Participation Research Centre (PPRC) This book provides critical insights and is timely, as it outlines how girls and women in Bangladesh have gained more opportunities in labor force participation, control over household and financial assets, as well as greater prospects for entrepreneurship. The findings will greatly contribute to future policy and planning for government and key stakeholders working to advance women ' s economic empowerment in the country. --Sabina Faiz Rashid, PhD, Dean and Professor, BRAC James P. Grant School of Public Health BRAC University

This report describes the current situation with regard to universal health coverage and global quality of care, and outlines the steps governments, health services and their workers, together with citizens and patients need to urgently take.

This book brings together a broad range of approaches and methodologies relevant to international comparative vocational education and training (VET). Revealing how youth in transition is affected by economic crises, it provides essential insights into the strengths and weaknesses of the various systems and prospects of VET in contexts ranging from North America to Europe, (e.g. Spain, Germany or the UK) to Asia (such as China, Thailand and India). Though each country examined in this volume is affected by the economic crisis in a different way, the effects are especially apparent for the young generation. In many countries the youth unemployment rate is still very high and the job perspectives for young people are often limited at best. The contributions in this volume demonstrate that VET alone cannot solve these problems, but can be used to support a smooth transition from school to work. If the quality of VET is high and the status and job expectations are good, VET can help to fill the skills gap, especially at the intermediate skill level. Furthermore, VET can also offer a realistic alternative to the university track for young people in many countries.

South Asian leaders have made it a priority to tackle key regional issues such as poverty, environment degradation, trade and investment barriers and food insecurity, among others.

The book that inspired the major new motion picture Mandela: Long Walk to Freedom. Nelson Mandela is one of the great moral and political leaders of our time: an international hero whose lifelong dedication to the fight against racial oppression in South Africa won him the Nobel Peace Prize and the presidency of his country. Since his triumphant release in 1990 from more than a quarter-century of imprisonment, Mandela has been at the center of the most compelling and inspiring political drama in the world. As president of the African National Congress and head of South Africa's antiapartheid movement, he was instrumental in moving the nation toward multiracial government and majority rule. He is revered everywhere as a vital force in the fight for human rights and racial equality. LONG WALK TO FREEDOM is his moving and exhilarating autobiography, destined to take its place among the finest memoirs of history's greatest figures. Here for the first time, Nelson Rolihlahla Mandela tells the extraordinary story of his life—an epic of struggle, setback, renewed hope, and ultimate triumph.
