A balanced, thought-provoking series of selected readings on professionalism and ethics in engineering. Addresses such topics as the concept of professionalism; education and maintenance of competence; registration; the role of professional and technical societies; professional autonomy; engineers' responsibilities for the social effects of engineering practice; whistle-blowing; and the formulation and enforcement of codes of ethics. Includes case studies of the ethical dilemmas faced in engineering practice, compilations of major codes of engineering ethics, and references for further reading.

Accounting sustainably involves accounting for and to the natural environment, and accounting for and to society, including groups currently oppressed or disadvantaged by unsustainable processes and practices. This book creates a compelling case for the inclusion of sustainability at the heart of accounting educational programmes, offering critical lessons and identifying risks to avoid when designing accounting programmes and courses. Accounting sustainability has moved from the side-lines of policy discourses, accounting institutions, professional accounting practices, and research activities into the mainstream. The chapters in this proposed book engage in a critical dialogue to facilitate change in accounting education for sustainability. They dispel the myth that accounting for sustainability is an oxymoron, bad for business, unrelated to practice, or contrary to professional accounting bodies' accreditation requirements. This book was originally published as a special issue of Accounting Education.
