The HIDL code style resembles C++ code in the Android framework, with 4-space indents and mixed-case filenames. Package declarations, imports, and docstrings are similar to those in Java, with slight modifications. The following examples for IFoo.hal and types.hal illustrate HIDL code styles and provide quick links to details on each style (IFooClientCallback.hal, IBar.hal, and IBaz.hal have been omitted).

standard of their choosing, such as the Google Java Style Guide. Be consistent. One of the simplest rules is BE CONSISTENT. If you're editing code, take a few minutes to look at the surrounding code and determine its style. If that code uses spaces around the if clauses, you should, too. If the code comments have little boxes of stars around them, make your comments have little boxes of stars around them, too.

According to the Android code style guide, the standard practices for some of the predefined annotations in Java are: @Override: The @Override annotation must be used whenever a method overrides the declaration or implementation from a super-class. For example, if you use the @inheritdocs Javadoc tag, and derive from a class (not an interface), you must also annotate that the method @Overrides the parent class's

Blog posts. Styles and themes on Android allow you to separate the details of your app design from the UI structure and behavior, similar to stylesheets in web design. A style is a collection of attributes that specify the appearance for a single View . A style can specify attributes such as font color, font size, background color, and much more. A theme is a collection of attributes that's applied to an entire app, activity, or view hierarchy—not just an individual view.
