Look around: the largest migration in human history is under way. For the first time ever, more people are living in cities than in rural areas. Between 2007 and 2050, the world's cities will have absorbed 3.1 billion people. Urbanization is the mass movement that will change our world during the twenty-first century, and the "arrival city" is where it is taking place. The arrival city exists on the outskirts of the metropolis, in the slums, or in the suburbs; the American version is New York's Lower East Side of a century ago or today's Herndon County, Virginia. These are the places where newcomers try to establish new lives and to integrate themselves socially and economically. Their goal is to build communities, to save and invest, and, hopefully, move out, making room for the next wave of migrants. For some, success is years away; for others, it will never come at all. As vibrant places of exchange, arrival cities have long been indicators of social health. Whether it's Paris in 1789 or Tehran in 1978, whenever migrant populatons are systematically ignored, we should expect violence and extremism. But, as the award-winning journalist Doug Saunders demonstrates, when we make proper investments in our arrival cities—through transportation, education, security, and citizenship—a prosperous middle class develops. Saunders takes us on a tour of these vital centers, from Maryland to Shenzhen, from the favelas of Rio to the shantytowns of Mumbai, from Los Angeles to Nairobi. He uncovers the stories—both inspiring and heartbreaking—of the people who live there, and he shows us how the life or death of our arrival cities will determine the shape of our future.

Exile and migration played a critical role in the diffusion and development of modernism around the globe, yet have long remained largely understudied phenomena within art historiography. Focusing on the intersections of exile, artistic practice and urban space, this volume brings together contributions by international researchers committed to revising the historiography of modern art. It pays particular attention to metropolitan areas that were settled by migrant artists in the first half of the 20th century. These arrival cities developed into hubs of artistic activities and transcultural contact zones where ideas circulated, collaborations emerged, and concepts developed. Taking six major cities as a starting point – Bombay (now Mumbai), Buenos Aires, Istanbul, London, New York, and Shanghai – the authors explore how urban topographies and landscapes were modified by exiled artists re-establishing their practices in metropolises across the world. Questioning the established canon of Western modernism, *Arrival Cities* investigates how the migration of artists to different urban spaces impacted their work and the historiography of art. In doing so, it aims to encourage the discussion between international scholars from different research fields, such as exile studies, art history, social history, architectural history, architecture, and urban studies.

The classic work on the evaluation of city form. What does the city's form actually mean to the people who live there? What can the city planner do to make the city's image more vivid and memorable to the city dweller? To answer these questions, Mr. Lynch, supported by studies of Los Angeles, Boston, and Jersey City, formulates a new criterion—imageability—and shows its potential value as a guide for the building and rebuilding of cities. The wide scope of this study leads to an original and vital method for the evaluation of city form. The architect, the planner, and certainly the city dweller will all want to read this book.

"Told brilliantly, even unforgettably ... An American story, one that belongs to all of us." — Boston Globe "A richly textured guide to the history of our immigrant nation's pinnacle immigrant city has managed to enter the stage during an election season that has resurrected this historically fraught topic in all its fierceness." — New York Times Book Review New York has been America's city of immigrants for nearly four centuries. Growing from Peter Minuit's tiny settlement of 1626 to a clamorous metropolis with more than three million immigrants today, the city has always been a magnet for transplants from all over the globe. City of Dreams is the long-overdue, inspiring, and defining account of New York's immigrants, both famous and forgotten: the young man from the Caribbean who relocated to New York and became a founding father, Russian-born Emma Goldman, who condoned the murder of American industrialists as a means of aiding downtrodden workers, Dominican immigrant Oscar de la Renta, who dressed first ladies from Jackie Kennedy to Michelle Obama. Over ten years in the making, Tyler Anbinder's story is one of innovators and artists, revolutionaries and rioters, staggering deprivation and soaring triumphs. In so many ways, today's immigrants are just like those who came to America in centuries past—and their stories have never before been told with such breadth of scope, lavish research, and resounding spirit. "A masterful achievement, *City of Dreams* is the definitive account of the American origin story, as told through our premier metropolis. Bold, exhaustive, always surprising, Anbinder's book is a wonderful reminder of how we came to be who we are." — Timothy Egan, best-selling author of *The Immortal Irishman*

To the charity workers, Dabaab refugee camp is a humanitarian crisis; to the Kenyan government, it is a 'nursery for terrorists'; to the western media, it is a dangerous no-go area; but to its half a million residents, it is their last resort. Situated hundreds of miles from any other settlement, deep within the inhospitable desert of northern Kenya where only thorn bushes grow, Dadaab is a city like no other. Its buildings are made from mud, sticks or plastic, its entire economy is grey, and its citizens survive on rations and luck. Over the course of four years, Ben Rawlence became a first-hand witness to a strange and desperate limbo-land, getting to know many of those who have come there seeking sanctuary. Among them are Guled, a former child soldier who lives for football, Nisho, who scrapes an existence by pushing a wheelbarrow and dreaming of riches, Tawane, the indomitable youth leader, and schoolgirli Keyro, whose future hangs upon her education. In *City of Thorns*, Rawlence interweaves the stories of nine individuals to show what life is like in the camp and to sketch the wider political forces that keep the refugees trapped there. Rawlence combines intimate storytelling with broad socio-political investigative journalism, doing for Dadaab what Katherine Boo's *Behind the Beautiful Forevers* did for the Mumbai slums. Lucid, vivid and illuminating, *City of Thorns* is an urgent human story with deep international repercussions, brought to life through the people who call Dadaab home.

Thirty years after its publication, *The Death and Life of Great American Cities* was described by *The New York Times* as "perhaps the most influential single work in the history of town planning... [It] can also be seen in a much larger context. It is first of all a work of literature; the descriptions of street life as a kind of ballet and the bitingly satiric account of traditional planning theory can still be read for pleasure even by those who long ago absorbed and appropriated the book's arguments." Jane Jacobs, an editor and writer on architecture in New York City in the early sixties, argued that urban diversity and vitality were being destroyed by powerful architects and city planners. Rigorous, sane, and delightfully epigrammatic, Jacobs's small masterpiece is a blueprint for the humanistic management of cities. It is sensible, knowledgeable, readable, indispensable. The author has written a new foreword for this Modern Library edition.

To face the future, Canada needs more Canadians. But why and how many? Canada's population has always grown slowly, when it has grown at all. That wasn't by accident. For centuries before Confederation and a century after, colonial economic policies and an inward-facing world view isolated this country, attracting few of the people and building few of the institutions needed to sustain a sovereign nation. In fact, during most years before 1967, a greater number of people fled Canada than immigrated to it. Canada's growth has faltered and left us underpopulated ever since. At Canada's 150th anniversary, a more open, pluralist and international vision has largely overturned that colonial mindset and become consensus across the country and its major political parties. But that consensus is ever fragile. Our small population continues to hamper our competitive clout, our ability to act independently in an increasingly unstable world, and our capacity to build the resources we need to make our future viable. In *Maximum Canada*, a bold and detailed vision for Canada's future, award-winning author and Globe and Mail columnist Doug Saunders proposes a most audacious way forward: to avoid global obscurity and create lasting prosperity, to build equality and reconciliation of indigenous and regional divides, and to ensure economic and ecological sustainability, Canada needs to triple its population.

"Natural selection can preserve innovations, but it cannot create them. Nature's many innovations—some uncannily perfect—call for natural principles that accelerate life's ability to innovate." Darwin's theory of natural selection explains how useful adaptations are preserved over time. But the biggest mystery about evolution eluded him. As genetics pioneer Hugo de Vries put it, "natural selection may explain the survival of the fittest, but it cannot explain the arrival of the fittest." Can random mutations over a mere 3.8 billion years really be responsible for wings, eyeballs, knees, camouflage, lactose digestion, photosynthesis, and the rest of nature's creative marvels? And if the answer is no, what is the mechanism that explains evolution's speed and efficiency? In *Arrival of the Fittest*, renowned evolutionary biologist Andreas Wagner draws on over fifteen years of research to present the missing piece in Darwin's theory. Using experimental and computational technologies that were heretofore unimagined, he has found that adaptations are not just driven by chance, but by a set of laws that allow nature to discover new molecules and mechanisms in a fraction of the time that random variation would take. Consider the Arctic cod, a fish that lives and thrives within six degrees of the North Pole, in waters that regularly fall below 0 degrees. At that temperature, the internal fluids of most organisms turn into ice crystals. And yet, the arctic cod survives by producing proteins that lower the freezing temperature of its body fluids, much like antifreeze does for a car's engine coolant. The invention of those proteins is an archetypal example of nature's enormous powers of creativity. Meticulously researched, carefully argued, evocatively written, and full of fascinating examples from the animal kingdom, *Arrival of the Fittest* offers up the final puzzle piece in the mystery of life's rich diversity.
