If  $f(x)$  is a function defined on an interval  $[a, b]$ , the definite integral of  $f$  from  $a$  to  $b$  is given by. (Chapter 5.1)  $\int_a^b f(x) dx = \lim_{n \rightarrow \infty} \sum_{i=1}^n f(x_i^*) \Delta x$ , provided the limit exists. If this limit exists, the function  $f(x)$  is said to be integrable on

Chapter 5 Integration. Chapter 5 Integration. 5.1 Definition. Given a function  $f(x)$  (called the integrand) defined on a closed interval  $[a, b]$ , the (def- inite) integral  $\int_a^b f(x) dx$  of  $f$  over  $[a, b]$  is the area of the  $(x, y)$  plane bounded by the graph of  $f$ , the  $x$  axis and the vertical lines  $x = a$ ,  $x = b$ , where areas

Antidifferentiation: The indefinite integral

Definition: A function  $F(x)$  is an antiderivative of  $f(x)$  if  $F'(x) = f(x)$ . The process of finding antiderivative is called antidifferentiation or indefinite integration. Fundamental property of antiderivatives: Chapter 5. Integration.

This extensive integration of the supply chain can be viewed as a shift from vertical corporate integration to a virtually integrated corporation (Magretta, 1998).

Vertical integration was essential in the early years of computer manufacturing when the supplier base was not well established and assemblers had little choice but to design and build components and assemble the entire end product ...
