Background and purpose: Making evidence-based practice (EBP) a sustained reality is a difficult endeavor. This relates, among other factors, to lack of sufficient research upon which to base implementation efforts. Alternative sources of evidence therefore need to be considered, particularly where organizational level EBP is the goal.

clinical neuropsychologists to the concepts and challenges involved in conducting cost outcome research. It provides examples of how such research can be conducted within clinical neuropsychology and therefore is a "beginning" step in what must become an interdisciplinary effort. The text suggests that more than cost effectiveness studies should be considered when demonstrating the clinical utility of neuropsychological services. The concept of "objective" and "subjective" markers of value is emphasized, particularly as it relates to measuring the impact of a neuropsychological examination. Chapters review the economic burdens associated with different neurological conditions commonly seen by neuropsychologists. They also provide
