British Birds | Bird Identification Guides | Bird Spot

When using a bird book to help identify something you've seen, bear in mind that real birds do not often look exactly like the pictures. Every bird is slightly different. Most books illustrate birds at one or two times of year, but birds replace their feathers at regular intervals and so are often in an 'intermediate' stage not illustrated.

British Birds Of Prey | Identification Guides | Bird Spot

Hawks and eagles: medium to very large; hooked bills; rounded or broad wings; sharp talons; tend to soar. Falcons: small to medium-sized; tapered wings and tails; fast and agile; often hover. Owls: small to large; rounded heads; small, hooked bills; forward-facing eyes; mainly nocturnal.

Identify birds of prey | The Wildlife Trusts

Key information. The knot is a dumpy, short-legged, stocky wading bird. In winter, it is grey above and white below - in summer the chest, belly and face are brick-red. In flight, it shows a pale rump and a faint wing-stripe. It forms huge flocks in winter which wheel and turn in flight, flashing their pale underwings as they twist and turn.

Knot Bird Facts | Calidris Canutus - The RSPB

When observing a bird in flight note first its shape: its outline or silhouette. Notice the shape of the wings and tail, and note shape of the bill, length of the neck, and if the feet trail behind the tail. A little anatomy: the wing. The wing of birds is analogous to the arm of humans.

Greg in San Diego: Tutorial: How to Identify Birds in Flight

Body plans and flight styles are helpful in identifying similarly-sized birds of prey at a distance. Is the bird large and flying flat, holding its wings in a vee and tilting as it flies, or M-shaped? If you are in northeastern Iowa, the first is probably an eagle, the second is probably a turkey vulture, and the third is probably an
