Describes the life of the famous wildlife artist, known for his groundbreaking images of dinosaurs and other prehistoric creatures, and includes insights on his scientifically accurate restorations and excerpts from his personal papers.

Describes in text and pictures weapons used through the ages, from the stones of prehistoric man to the bombs of modern times.

This book explores the principles of the display of art in the magnificent Roman palaces of the early modern period, focusing attention on how the parts function to convey multiple artistic, social, and political messages, all within a splendid environment that provided a model for aristocratic residences throughout Europe. Many of the objects exhibited in museums today once graced the interior of a Roman Baroque palazzo or a setting inspired by one. In fact, the very convention of a paintings gallery— the mainstay of museums—traces its ancestry to prototypes in the palaces of Rome. Inside Roman palaces, the display of art was calibrated to an increasingly accentuated dynamism of social and official life, activated by the moving bodies and the attention of residents and visitors. Display unfolded in space in a purposeful narrative that reflected rank, honor, privilege, and intimacy. With a contextual approach that encompasses the full range of media, from textiles to stucco, this study traces the influential emerging concept of a unified interior. It argues that art history—even the emergence of the modern category of fine art—was worked out as much in the rooms of palaces as in the printed pages

of Vasari and other early writers on art.

A noted Italian archaeologist describes Sicilian culture from Palaeolithic times to the arrival of Greek colonists in the 8th century B. C.

This book considers the early copper and copper-alloy metallurgy of the entire Circum- Alpine region. It introduces a new approach to the interpretation of chemical composition data sets, which has been applied to a comprehensive regional database for the first time.

A free open access ebook is available upon publication. Learn more at www.luminosoa.org. Situated at the disciplinary boundary between prehistory and history, this book presents a new synthesis of Late Bronze Age and Early Iron Age Greece, from the rise and fall of Mycenaean civilization, through the "Dark Age," and up to the emergence of city-states in the Archaic period. This period saw the growth and decline of varied political systems and the development of networks that would eventually expand to nearly all shores of the Middle Sea. Alex R. Knodell argues that in order to understand how ancient Greece changed over time, one must analyze how Greek societies constituted and reconstituted themselves across multiple scales, from the local to the regional to the Mediterranean. Knodell employs innovative network and spatial analyses to understand the regional diversity and connectivity that drove the growth of early Greek polities. As a groundbreaking study of landscape, interaction, and sociopolitical change, *Societies in Transition in Early Greece* systematically bridges the divide between the Mycenaean period and the Archaic Greek world to shed new light on an often-overlooked period of world history.
