The Literary Agenda is a series of short polemical monographs about the importance of literature and of reading in the wider world and about the state of literary education inside schools and universities. The category of 'the literary' has always been contentious. What is clear, however, is how increasingly it is dismissed or is unrecognised as a way of thinking or an arena for thought. It is sceptically challenged from within, for example, by the sometimes rival claims of cultural history, contextualized explanation, or media studies. It is shaken from without by even greater pressures: by economic exigency and the severe social attitudes that can follow from it; by technological change that may leave the traditional forms of serious human communication looking merely antiquated. For just these reasons this is the right time for renewal, to start reinvigorated work into the meaning and value of literary reading. Being Literate in the 21st Century wrestles with critical, timely questions for 21st-century society. How does literacy change the human brain? What does it mean to be a literate or a non-literate person in the present digital culture: for example, what will be lost in the present reading brain, and what will be gained with different mediums than print? What are the consequences of a digital reading brain for the literary mind and for writing itself? Can knowledge about the reading brain and advances in technology offer new forms of literacy and new forms of knowledge to the peoples in remote regions of the world who would never otherwise become literate? By using both research from cognitive neuroscience, psycholinguistics, child development, and education, and considering literary examples from world literature, Maryanne Wolf plots a course that seeks to preserve the deepest forms of reading from the past, while developing the cognitive skills necessary for this century's next generation.

Literacy in the 21st century is about constructing and validating knowledge. Digital technologies have enabled the spread of all kinds of information, displacing traditional formats of usually more carefully curated information such as encyclopaedias and newspapers. The development of science literacy has the potential to have an enormous impact on real world outcomes. Specifically, developing science literacy may persuade individuals to act. We hope that this book will influence scientists, science journalists, sociologists, anthropologists, communication specialists, political leaders, media outlets, educational institutions, and individual science content consumers. The chapters in this book describe a definition of science literacy that draws on the emotional, cognitive, and social. The authors strive to help prepare individuals to read, write, and speak science in a continuously evolving information landscape. In order to meet these objectives, the chapters examine both qualitative and quantitative research. It is within these frameworks that we can begin to address science literacy in the 21st century.

Selfe tries to identify the effects of this new literacy agenda, focusing specifically on what she calls "serious and shameful" inequities it fosters in our culture and in the public education system: among them, the continuing presence of racism, poverty, and illiteracy.--BOOK JACKET. As the academic and scholarly landscape are continuously enhanced by the advent of new technology, librarians must be aware and informed to develop and implement best practices. Effective administration of libraries is a crucial part of delivering library services to patrons and ensuring that information resources are disseminated efficiently. Advanced Methodologies and Technologies in Library Science, Information Management, and Scholarly Inquiry provides emerging information on modern knowledge management and effective means of sharing research through libraries. While highlighting the importance of digital literacy and information resources, readers will also learn new methods in information retrieval and research methods in quality scholarly inquiry. This book is an important resource for librarians, administrators, information science professionals, information technology specialists, students, and researchers seeking current information on the importance of effective library science technology.

This book discusses current issues in literacy teacher education and illuminates the complexity of supporting self-efficacious educators to teach language and literacy in the twenty-first century classroom. In three sections, chapter authors first detail how teacher education programs can be revamped to include content and methods to inspire self-efficacy in pre-service teachers, then reimagine how teacher candidates can be set up for success toward obtaining this. The final section encourages readers to ruminate on the interplay among teacher candidates as they transition into practice and work to have both self- and collective- efficacy.
