Nikon use the term DX as a suffix for Speedlight names that support the pre-flash function which is an essential element of D-TTL operation. i-TTL - Is an evolution of D-TTL that incorporates more accurate systems for pre-flash. Metering is performed using light from the pre-flash reflected from the shutter curtain before exposure as with D-TTL.

[Guide to SLR TTL flash modes - nikonimgsupport.com](http://nikonimgsupport.com)

The TTL feature of a Nikon dedicated flash will only work with Nikon, however, it could possibly still be used in manual mode. In a nutshell, TTL is the way that the camera sets the exposure and flash intensity automatically by firing a nearly imperceptible pre-flash, taking an exposure reading, and adjusting settings accordingly.
