Leading theorists and practitioners trace the evolution of key ideas in urban and regional planning over the last hundred years Over the past hundred years of urbanization and suburbanization, four key themes have shaped urban and regional planning in both theory and practice: livability, territoriality, governance, and reflective professional practice. Planning Ideas That Matter charts the trajectories of these powerful planning ideas in an increasingly interconnected world. The contributors, leading theorists and practitioners, discuss livability in terms of such issues as urban density, land use, and the relationship between the built environment and natural systems; examine levels of territorial organization, drawing on literature on regionalism, metropolitanism, and territorial competition; describe the ways planning connects to policy making and implementation in a variety of political contexts; and consider how planners conceive of their work and learn from practice. Throughout, the emphasis is on how individuals and institutions—including government, business, professional organizations, and universities—have framed planning problems and ideas. The focus is less on techniques and programs than on the underlying concepts that have animated professional discourse over the years. The book is recommended for classroom use, as a reference for scholars and practitioners, and as a history of planning for those interested in the development of the field.

City and regional planners talk constantly about the things of the world—from highway interchanges and retention ponds to zoning documents and conference rooms—yet most seem to have a poor understanding of the materiality of the world in which they’re immersed. Too often planners treat built forms, weather patterns, plants, animals, or regulatory technologies as passively awaiting commands rather than actively involved in the workings of cities and regions. In the ambitious and provocative Planning Matter, Robert A. Beauregard sets out to offer a new materialist perspective on planning practice that reveals the many ways in which the nonhuman things of the world mediate what planners say and do. Drawing on actor-network theory and science and technology studies, Beauregard lays out a framework that acknowledges the inevitable insufficiency of our representations of reality while also engaging more holistically with the world in all of its diversity—including human and nonhuman actors alike.

As global warming advances, regions around the world are engaging in revolutionary sustainability planning - but with social equity as an afterthought. California is at the cutting edge of this movement, not only because its regulations actively reduce greenhouse gas emissions, but also because its pioneering environmental regulation, market innovation, and Left Coast politics show how to blend the "three Es" of sustainability—environment, economy, and equity. Planning Sustainable Cities and Regions is the first book to explain what this grand experiment tells us about the most just path moving forward for cities and regions across the globe. The book offers chapters about neighbourhoods, the economy, and poverty, using stories from practice to help solve puzzles posed by academic research. Based on the most recent demographic and economic trends, it overturns conventional ideas about how to build more livable places and vibrant economies that offer opportunity to all. This thought-provoking book provides a framework to deal with the new inequities created by the movement for more livable - and expensive - cities, so that our best plans for sustainability are promoting more equitable development as well. This book will appeal to students of urban studies, urban planning and sustainability as well as policymakers, planning practitioners, and sustainability advocates around the world.

Jane Jacobs (1916-2006) is history’s most celebrated urban critic. In addition to her classic, Death and Life of Great American Cities, Jacobs authored another half dozen influential books on urban planning, economics, and design. She was also a tireless advocate of vibrant city neighborhoods. Ideas that Matter: The Worlds of Jane Jacobs offers students, enthusiasts, and critics unprecedented insights into the work of this seminal thinker. Originally published in 1997, and continually sought after ever since, this 2011 edition includes a new introduction by distinguished urban scholar Mary Rowe. The book is a unique combination of Jacobs’ own writing (including previously unpublished speeches, letters, and articles), biography, and analysis by other scholars. Arranged by topic, it sheds light both on the development of Jacobs’ theories and her life. A chapter on Death and Life of American Cities reveals a debate between the author and her publisher about changing the book’s title. A section on Europe includes letters home from Frankfurt, Paris, London, Venice, and other cities that shaped her sensibilities. And a chapter titled “Ideas” offers analysis from ten contributors who examine Jacobs’ thoughts on issues from population growth to urban infill, self-employment to the wealth of nations. What results is a captivating scrapbook, offering a distinctive understanding of Jacobs’ most important ideas.

American communities are changing fast: ethnic minority populations are growing, home ownership is falling, the number of people per household is going up, and salaries are going down. According to Marc Brennan and Thomas W. Sanchez, the planning field is largely unprepared for these fundamental shifts. If planners are going to adequately serve residents of diverse ages, races, and income levels, they need to address basic issues of equity. Planning as if People Matter offers practical solutions to make our communities more livable and more equitable for all residents. While there are many books on environmental justice, relatively few go beyond theory to give real-world examples of how better planning can level inequities. In contrast, Planning as if People Matter is written expressly for planning practitioners, public administrators, policy-makers, activists, and students who must directly confront these challenges. It provides new insights about familiar topics such as stakeholder participation and civil rights. And it addresses emerging issues, including disaster response, new technologies, and equity metrics. Far from an academic treatment, Planning as if People Matter is rooted in hard data, on-the-ground experience, and current policy analysis. In this tumultuous period of economic change, there has never been a better time to reform the planning process. Brennan and Sanchez point the way toward a more just social landscape.

A lyrical, heart-lifting love letter to black and brown children everywhere: reminding them how much they matter, that they have always mattered, and they always will, from powerhouse rising star author Tami Charles and esteemed, award-winning illustrator Bryan Collier.

Asia is a crucial battleground for power and influence in the international system. It is also a theater of new experiments in regional cooperation that could redefine global order. Whose Ideas Matter? is the first book to explore the diffusion of ideas and norms in the international system from the perspective of local actors, with Asian regional institutions as its main focus. There’s no Asian equivalent of the EU or of NATO. Why has Asia, and in particular Southeast Asia, avoided such multilateral institutions? Most accounts focus on U.S. interests and perceptions or intraregional rivalries to explain the design and effectiveness of regional institutions in Asia such as SEATO, ASEAN, and the ASEAN Regional Forum. Amitav Acharya instead foregrounds the ideas of Asian policymakers, including their response to the global norms of sovereignty and nonintervention. Asian regional institutions are shaped by contestations and compromises involving emerging global norms and the preexisting beliefs and practices of local actors. Acharya terms this perspective “constitutive localization” and argues that international politics is not all about Western ideas and norms forcing their way into non-Western societies while the latter remain passive recipients. Rather, ideas are conditioned and accepted by local agents who shape the diffusion of ideas and norms in the international system. Acharya sketches a normative trajectory of Asian regionalism that constitutes an important contribution to the global sovereignty regime and explains a remarkable continuity in the design and functions of Asian regional institutions.

Successful web design teams depend on clear communication between developers and their clients—and among members of the development team. Wireframes, site maps, flow charts, and other design diagrams establish a common language so designers and project teams can capture ideas, track progress, and keep their stakeholders informed. In this all new edition of Communicating Design, author and information architect Dan Brown defines and describes each deliverable, then offers practical advice for creating the documents and using them in the context of teamwork and presentations, independent of methodology. Whatever processes, tools, or approaches you use, this book will help you improve the creation and presentation of your wireframes, site maps, flow charts, and other deliverables. The book now features: An improved structure comprising two main sections: Design Diagrams and Design Deliverables. The first focuses on the nuts and bolts of design documentation and the second explains how to pull it all together. New deliverable: design briefs, as well as updated advice on wireframes, flow charts, and concept models. More illustrations, to help designers understand the subtle variations and approaches to creating design diagrams. Reader exercises, for those lonely nights when all you really want to do is practice creating wireframes, or for use in workshops and classes. Contributions from industry leaders: Tamara Adlin, Stephen Anderson, Dana Chisnell, Nathan Curtis, Chris Fahey, James Melzer, Steve Mulder, Donna Spencer, and Russ Unger. “As an educator, I have looked to Communicating Design both as a formal textbook and an informal guide for its design systems that ultimately make our ideas possible and the complex clear.” —Liz Dautzico, from the Foreword
