The decisions and actions of NDT personnel have a profound impact on the world we live in, and society at large. Making a clear and public commitment to operating with integrity and honesty is essential to create a greater level of trust and confidence, and a positive perception of the non-destructive testing profession.

Ultrasonic Testing (U )  
Ultrasonic nondestructive testing, also known as ultrasonic NDT or simply UT, is a method of characterizing the thickness or internal structure of a test piece through the use of high frequency sound waves. The frequencies, or pitch, used for ultrasonic testing are many times higher than the limit of human hearing, most commonly in the range from 500 KHz to 20 MHz.
